VAN DYKE DRAWING PENCILS

15 Degrees
of Hardness

MADE IN
AMERICA

No. 600 VAN DYKE. Hexagon, Yellow Polish. One Dozen in a Box.
 $\frac{1}{2}$ Gross in a Carton

The Van Dyke Drawing Pencil, designed to meet the exacting requirements of the professional and technical user, may be absolutely depended upon for **quality and accuracy of degree** of the lead. It is the result of extended laboratory experiments and exhaustive tests directed by the experience of more than fifty years of pencil manufacturing, and supplemented by excessive care in all of the various operations.

The marked characteristics of the Van Dyke lead are durability, smoothness and homogeneity.

It is made in fifteen degrees of hardness:

6B (softest), 5B, 4B, 3B, 2B, B, HB (medium soft), F, H, 2H, 3H, 4H, 5H, 6H and 7H (hardest).

For Freehand Drawing, the soft degrees, 6B to B, with their possibilities of deep, rich tones, are suitable.

The Drafting Room is served by the harder degrees from 2H to 7H.

For general use HB (medium soft), F (medium) and H (medium hard), will afford perfect satisfaction.

The Van Dyke is the **best we produce**—an assurance of a quality meriting your complete confidence.

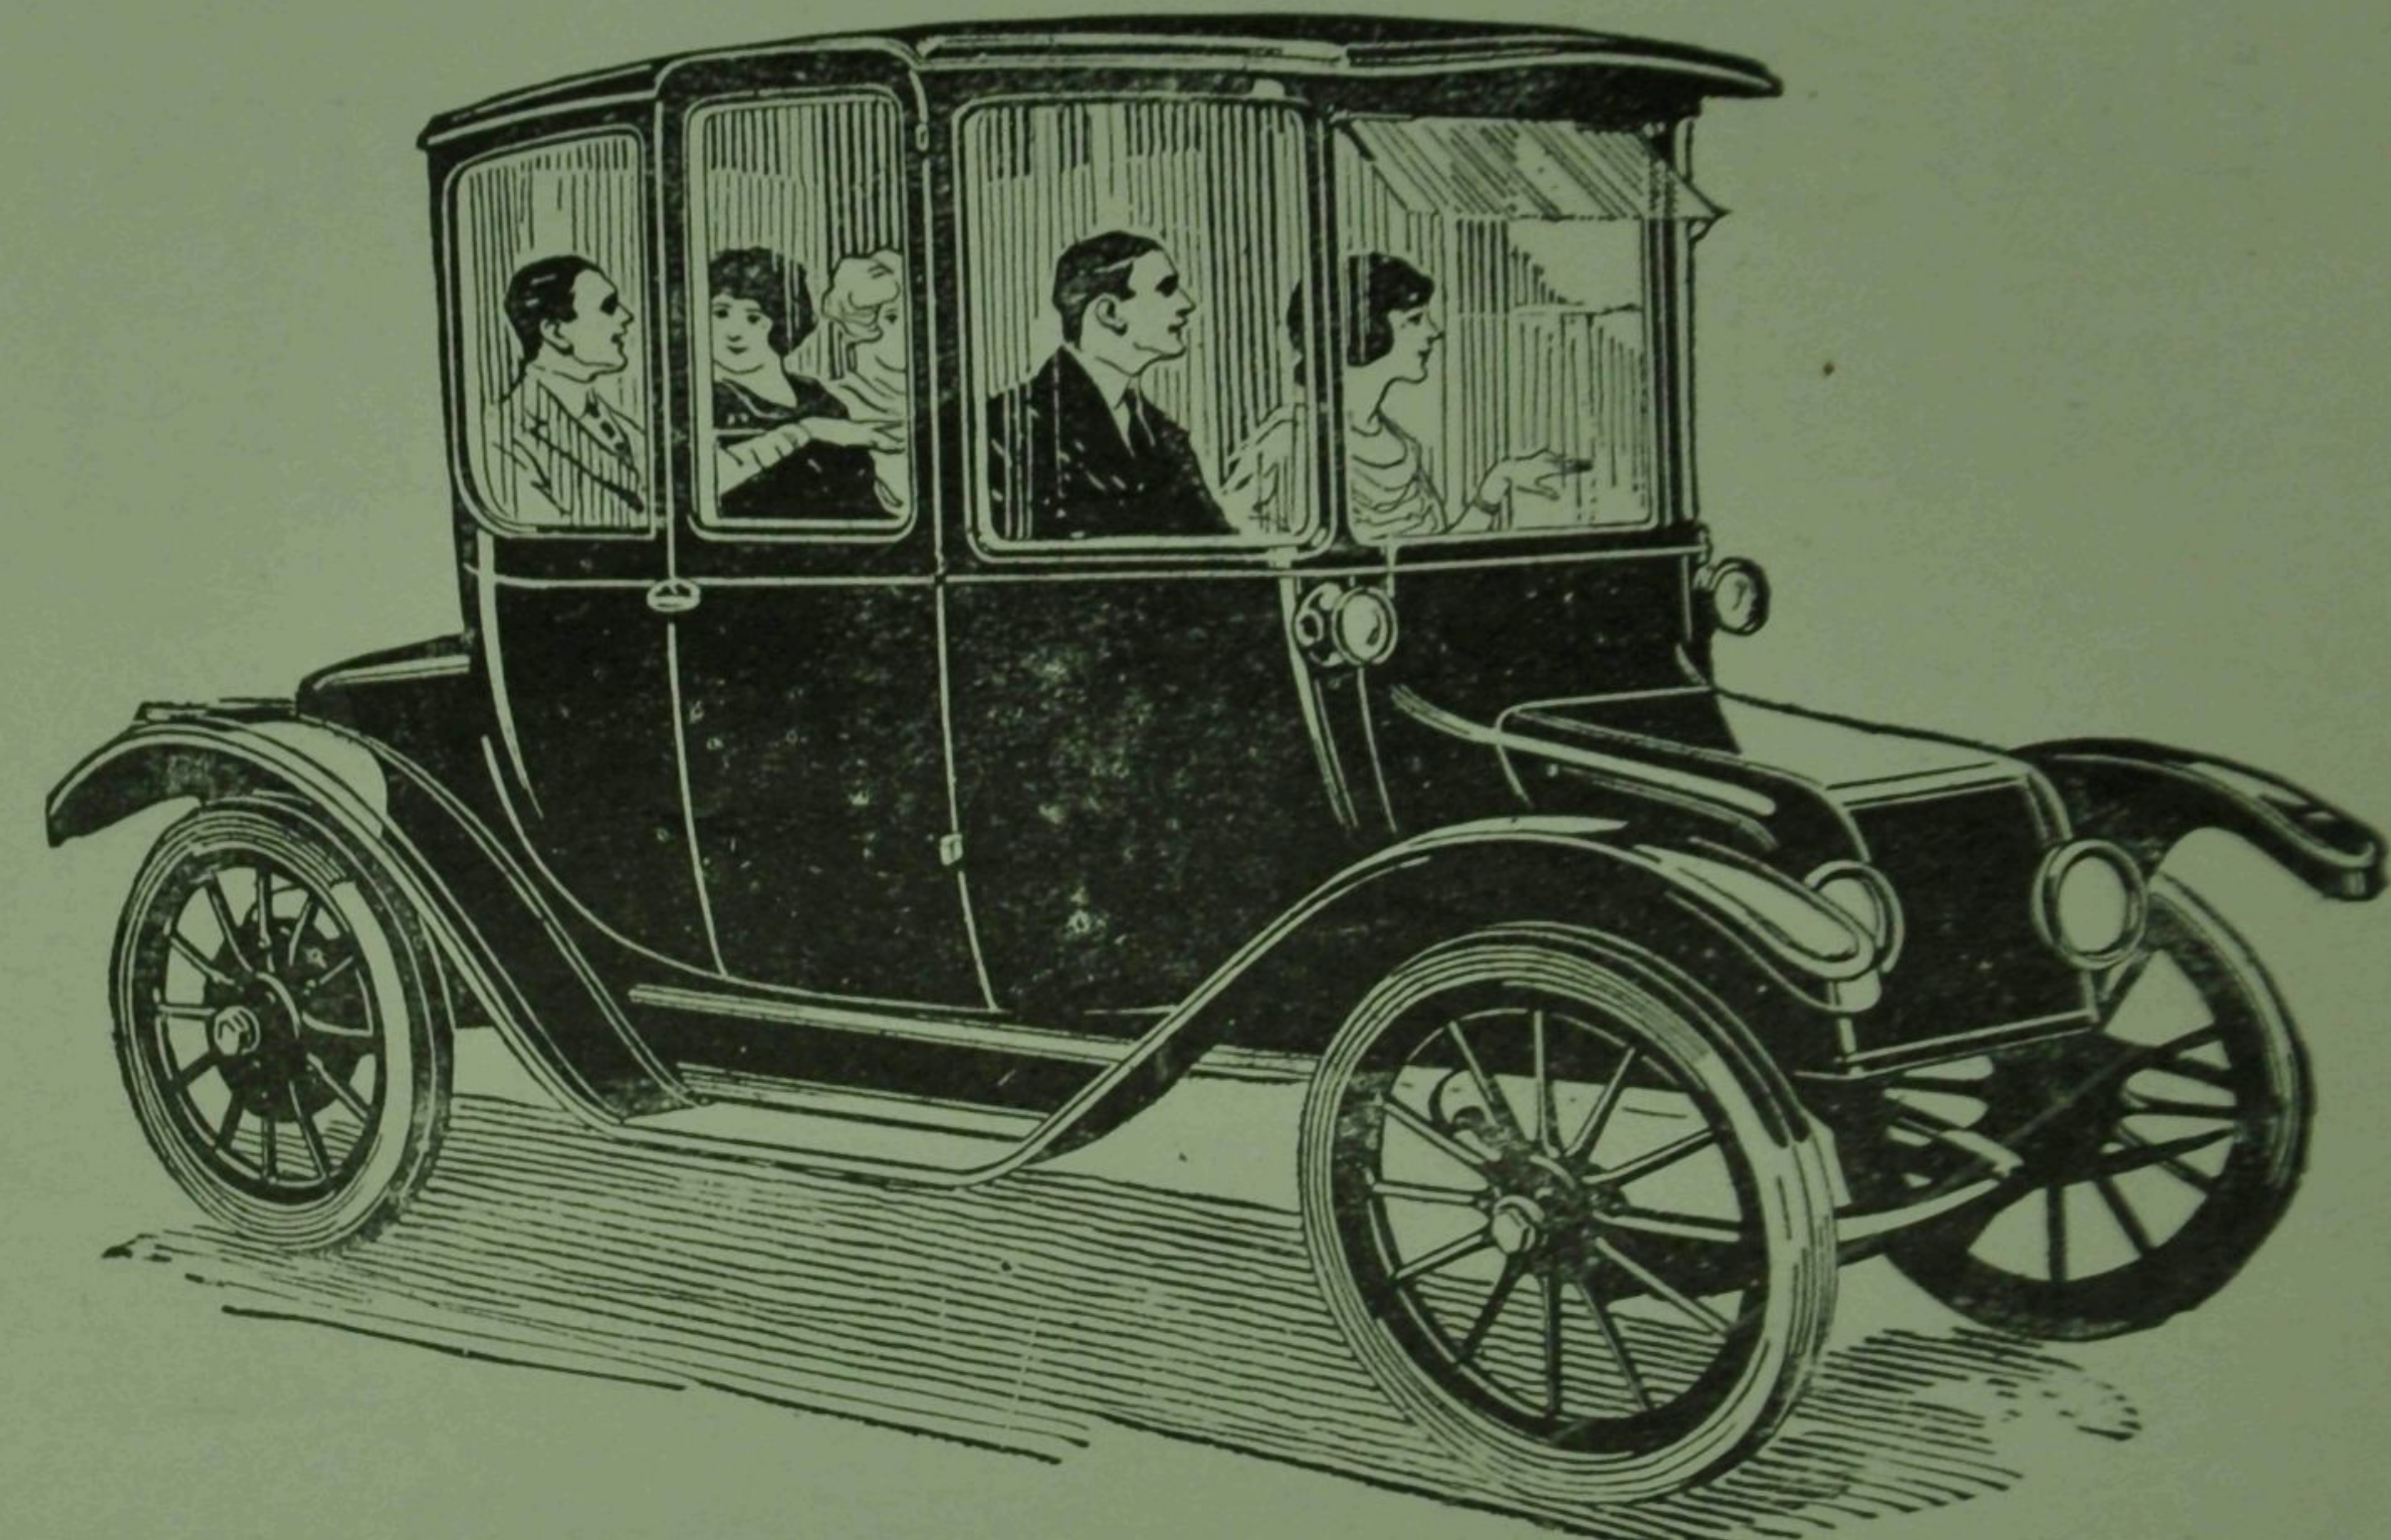

EXHIBIT NO. 4

Just inside the Door of the Armory
The 1915 Electrical Show

University of Illinois.

Get Them from the Co-op Store

EBERHARD FABER, NEW YORK

The Woods Electric Is the Most Popular

The Woods is the most popular electric wherever electrics are best known and most used. You can always be proud that your electric is a Woods. No other car in the world is so convenient, so satisfactory for every occasion.

In all weathers, winter or summer, rain or shine, the Woods is always instantly at your service and always thoroughly dependable.

The upkeep of a Woods Electric is surprisingly small when compared with any other type of vehicle of particular class.

You owe yourself and family the enjoyment and convenience of a Woods Electric now. It will pay back dividends in health and happiness. The 1915 models are beauties.

Remember we are always glad to arrange demonstrations whether you intend to buy now or later. Catalog fully illustrated mailed on request.

Electric Lights for Everybody

A "Hyrax-Exide" Unit with dynamo in place and connected to gas engine, making a complete electric plant.

Every farm, suburban home, store, hotel, etc., not situated near a public Central Station can now have its own electric lighting plant, which will give perfect service and which can be installed and operated at a small expense. The new

"Hyrax-Exide" Electric Plant Units

These Units consist of a "Hyrax-Exide" Battery assembled in rubber jars (charged) and a switchboard—all mounted on one skid as shown in the illustration above. The switchboard is made to fold down over the battery and the entire Unit is shipped in one box, which can be easily handled.

All that is necessary is to mount a standard dynamo on the skid in the space provided for it, connect up a couple of wires, belt a gas engine to the dynamo and the electric lighting plant is complete and ready for use. These low voltage plant-units are of the latest and best design and represent the results of years of experience by the oldest and largest battery maker in the country.

Our nearest office will be glad to send you on request, copies of our catalogues giving you full information on these electric lighting and power units.
